Top 3 Channels of Mental Health Support in Asian Communities

Executive Summary

Key Findings *[For public information and media release]*

- ☺ The magnitude of racial discrimination since Covid-19 is relatively small at 16.2%, likely attributed to the nationwide message “to be kind.” Racial discrimination levels are relatively higher among Koreans (30%) and Chinese (22.3%), younger Asians (around 19.3% on average), those in NZ for 1-10 years (19.5%), students (24.2%) and full-time employed (18.9%); However, when considering the population base, Chinese would be the largest group among all Asians and occupied near half of the cases (47.8%, n≈43,000) .
 - *[Comment] However, a range of extreme cases about COVID-19 related racial discrimination were reported by media in NZ, therefore those who were significantly impacted might need urgent counselling and help. The diversity and inclusion messages have been widely promoted in NZ in the past few years, overall this result is satisfactory and reflecting the achievements of Asian related services performed by relevant government agencies and NGOs;*
- ☺ 66% of Asians engaged in gambling activities in the last 12 months (national average: 38.7%). Those less likely to engage in gambling activity are: Chinese, Female, 50+ years, in NZ for less than 1 year, and retired. The most common is buying a Lotto, Strike, or Powerball ticket, and this remains true across all ethnic groups;
 - *[Comment] In most Asian countries, lottery is promoted as a charitable act (as well as in NZ). Among 20 people interviewed, none of them classified themselves as a gambler, and they perceived buying the lottery as a way to give back to the community, however “not buying it” means missing the opportunity to win a superior lifestyle;*
- ☺ Approximately 3/4 of Asians who engaged in gambling activities in the last 12 months, also engaged in online gambling during the Covid-19 lockdown. This meant 49.8% of Asians engaged in online gambling during lockdown - higher than the national average of 30.2%;
- ☺ Since lockdown, at least 43.9% of Asians have experienced some form of mental health distress. Nervousness and anxiety is the most widely experienced (57%). Chinese experienced feeling nervousness or anxiety the most but Indians and Koreans experienced it most regularly, given Korean and Chinese were previously reported to experience racial discrimination the most;
- ☺ Under 50’s experience nervousness or anxiety more and do so more regularly;
- ☺ Gamblers (61.2%) and victims of racial discrimination (72.4%) were more prone to experience serious mental health issues than those who were not. These significant differences clearly indicate the harm associated with gambling activities and racial discrimination;
- ☺ Asians primarily seek help from close friends (44.1%), family members (42.6%), and their family doctor/GP (28.3%). A small proportion (14%) do not seek any support at all. When patterns are compared with national statistics (e.g., doctor - 69% & other health professionals - 48%), Asians are less likely to seek help from doctors and other health professional/organisations, hence more educational campaigns around professional mental health services are needed.

Introduction & Methodology

Introduction

- ☺ Confidential

Methodology

- ☺ Data for this report was independently collected by Trace Research Ltd, between 22nd May and 3rd June 2020;
- ☺ The results of this study is based on an online survey distributed to a nationally representative group of Asians who live in New Zealand. The ethnic Chinese sample was collected through Trace Research's Chinese Immigrants Research Panel (by email invitation, 92%) and various social media platforms (8%). All other Asian ethnic samples were collected from Trace's partner online panel. Quota sampling was used (according to the 2018 NZ Census, Asian Adult population distribution) to ensure representativeness of all Asian ethnic groups;
- ☺ The results of this study is based on a sample of **580** Asians who currently live in NZ . They are spread across 17 regions in New Zealand but originally come from more than 9 Asian countries. Margin of error is $\pm 3.9\%$ at the 95% confidence interval. A full sample composition breakdown is provided in the following slide.

Sample Composition

Gender	%	Count
Male	49.3%	286

Total	100%	580

Section 3

Asian Gambling Behaviour

For public information and media release

66% of Asians engaged in gambling activities in the last 12 months. The most common activity is buying a Lotto, Strike, or Powerball ticket which sits at 54%, however other activities are less common - sitting at less than 20% each.

Ranking of Gambling Activities in Asian Community¹

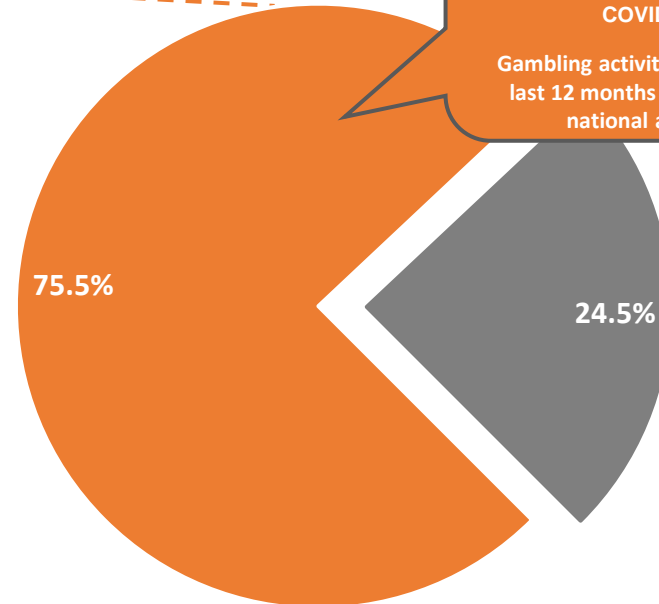

Approximately 3/4 of Asians who engaged in gambling activities in the last 12 months, **also** engaged in online gambling during the Covid-19 lockdown. This meant 49.8% of Asians engaged in online gambling during lockdown - higher than the national average of 30.2%.

Engaged in Gambling Activities in the last 12 months¹

■ Yes ■ No

Engaged in Online Gambling Activities During COVID19 Lockdown²

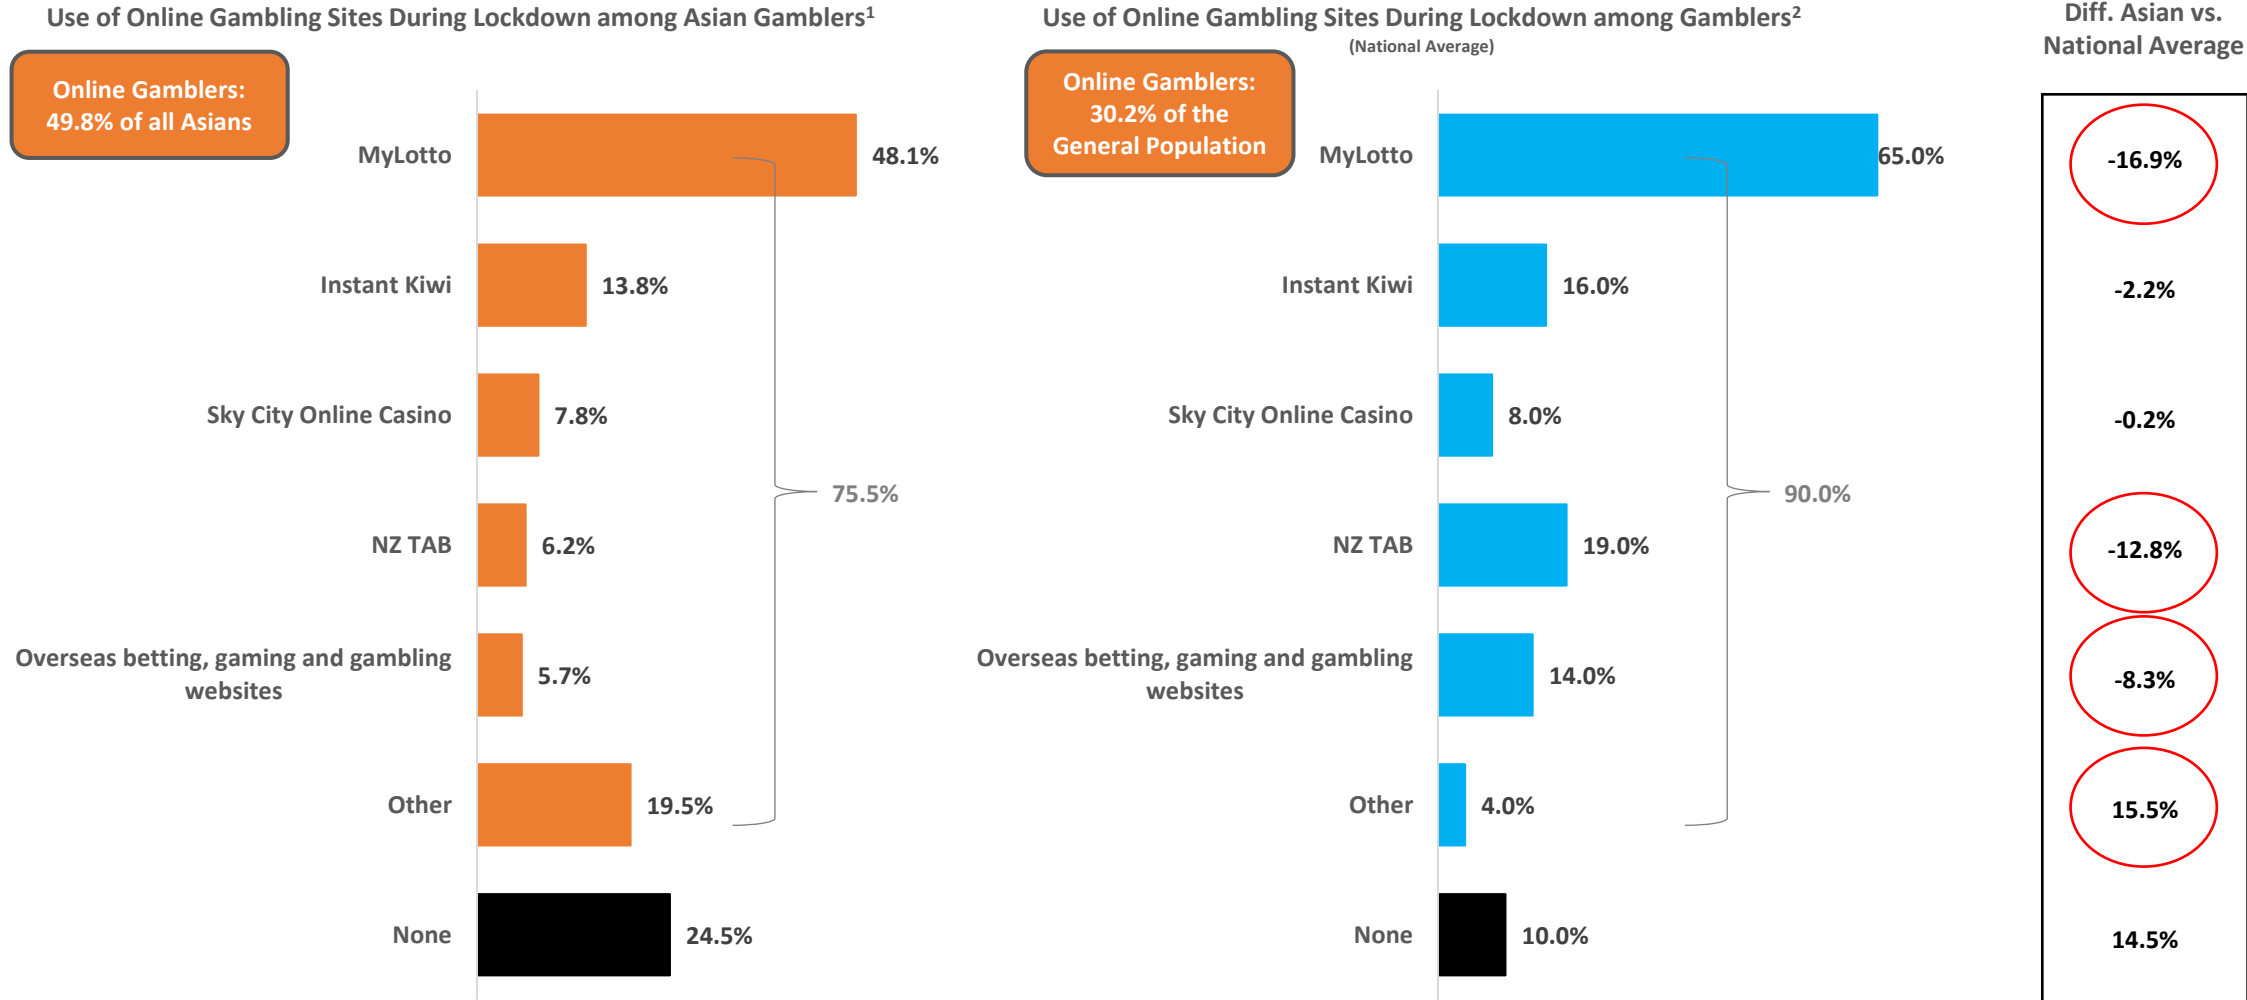

■ Yes ■ No

Overall 49.8% of Asians engaged in online gambling during the lockdown, this is significantly higher than the national average of 30.2% (Nielsen's IMPACT OF COVID-19 report)³

Gambling activities among Asians in the last 12 months is also higher than the national average of 38.7%

Analysis of online gambling websites used amongst Asian gamblers vs. (national) gamblers revealed that Asian gamblers are more likely to engage in “other forms of online gambling sites” compared to the national average but were less likely to use MyLotto, NZ TAB, and Overseas websites.

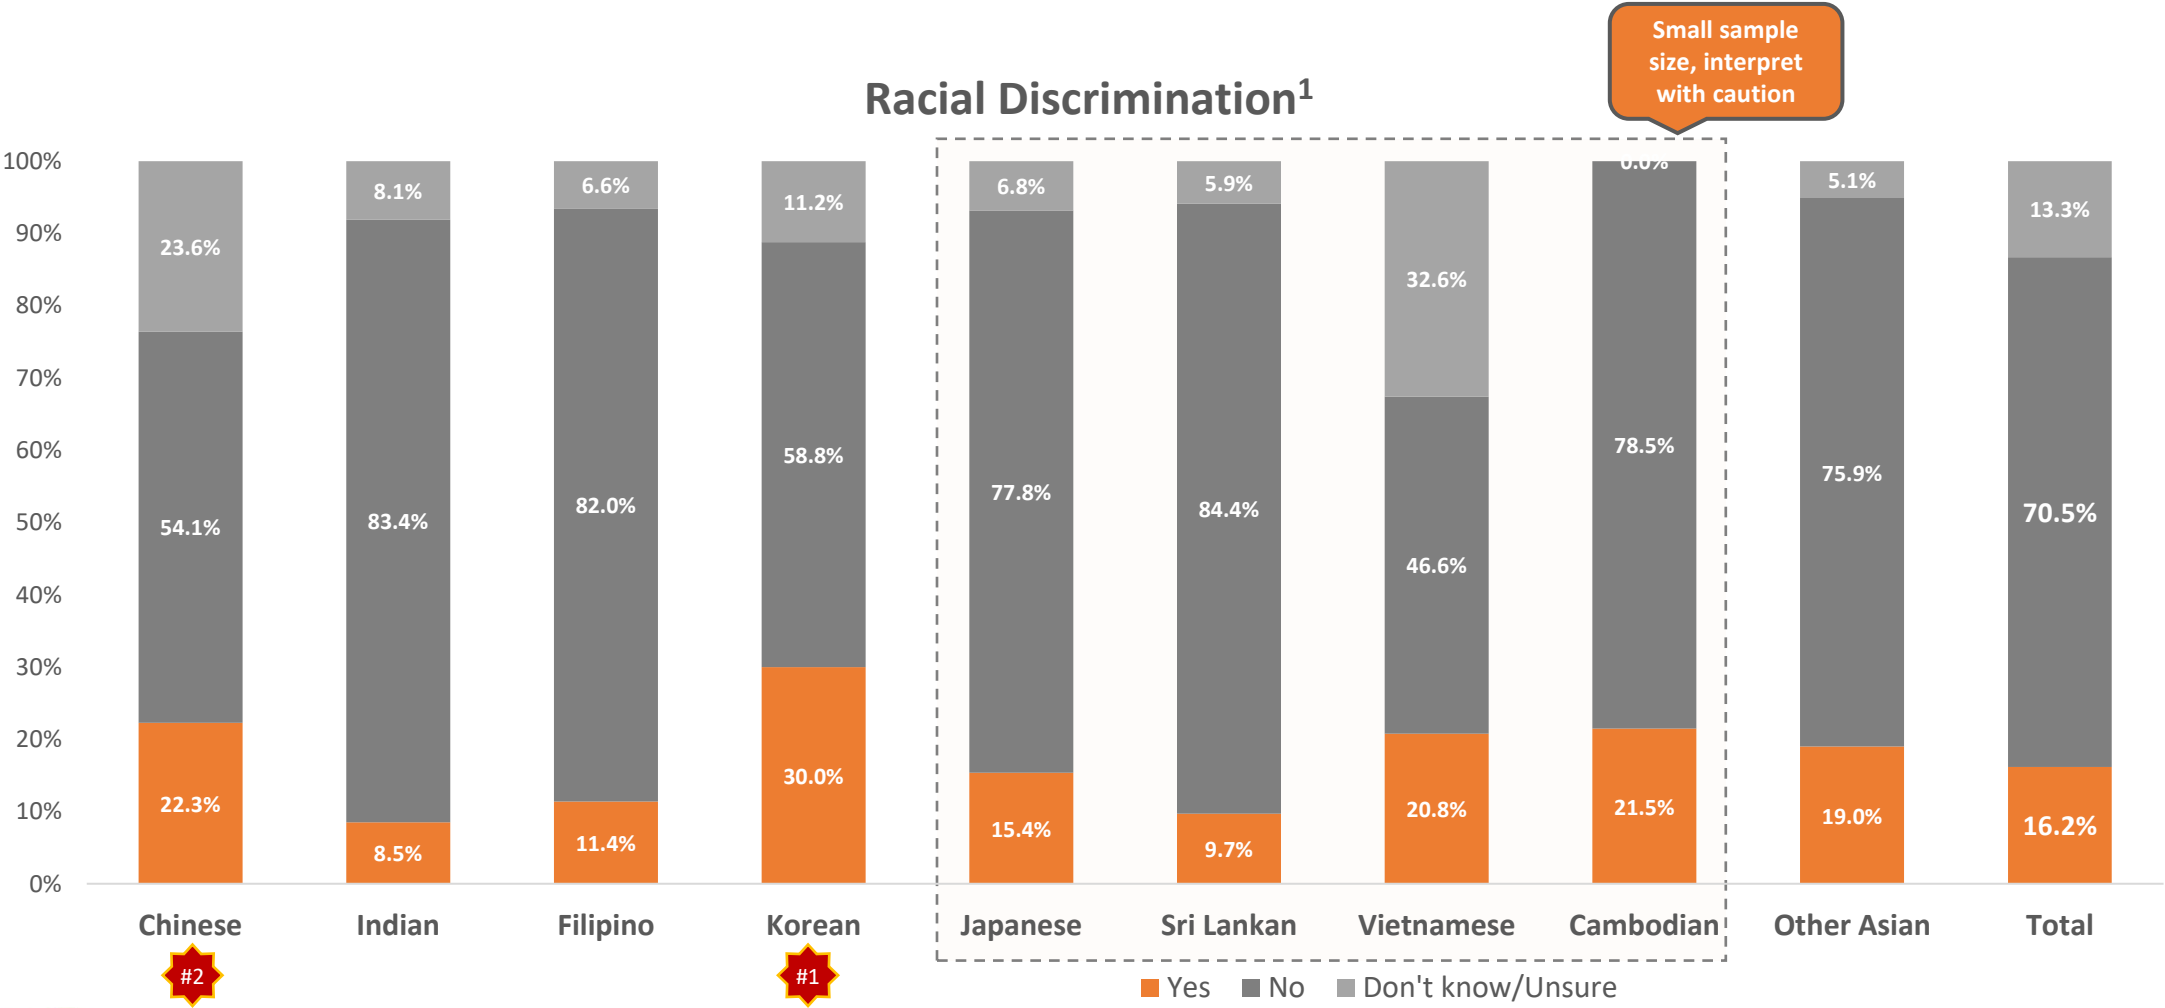

Section 4

Asian Mental Health & Wellbeing

For public information and media release

The magnitude of racial discrimination since Covid-19 is relatively small at 16.2%, likely attributed to the nationwide message to be kind. The ethnicities reported to experience discrimination the most are Korean, followed by Chinese. However, when considering the population base, Chinese would be the largest group among all Asians.

Note: 1. Q13. Since the COVID-19 outbreak in NZ, have you been discriminated against (e.g. making offensive remarks about your race, verbal/physical abuse) because of your ethnicity?
 Base: Total sample *small sample size = n<29

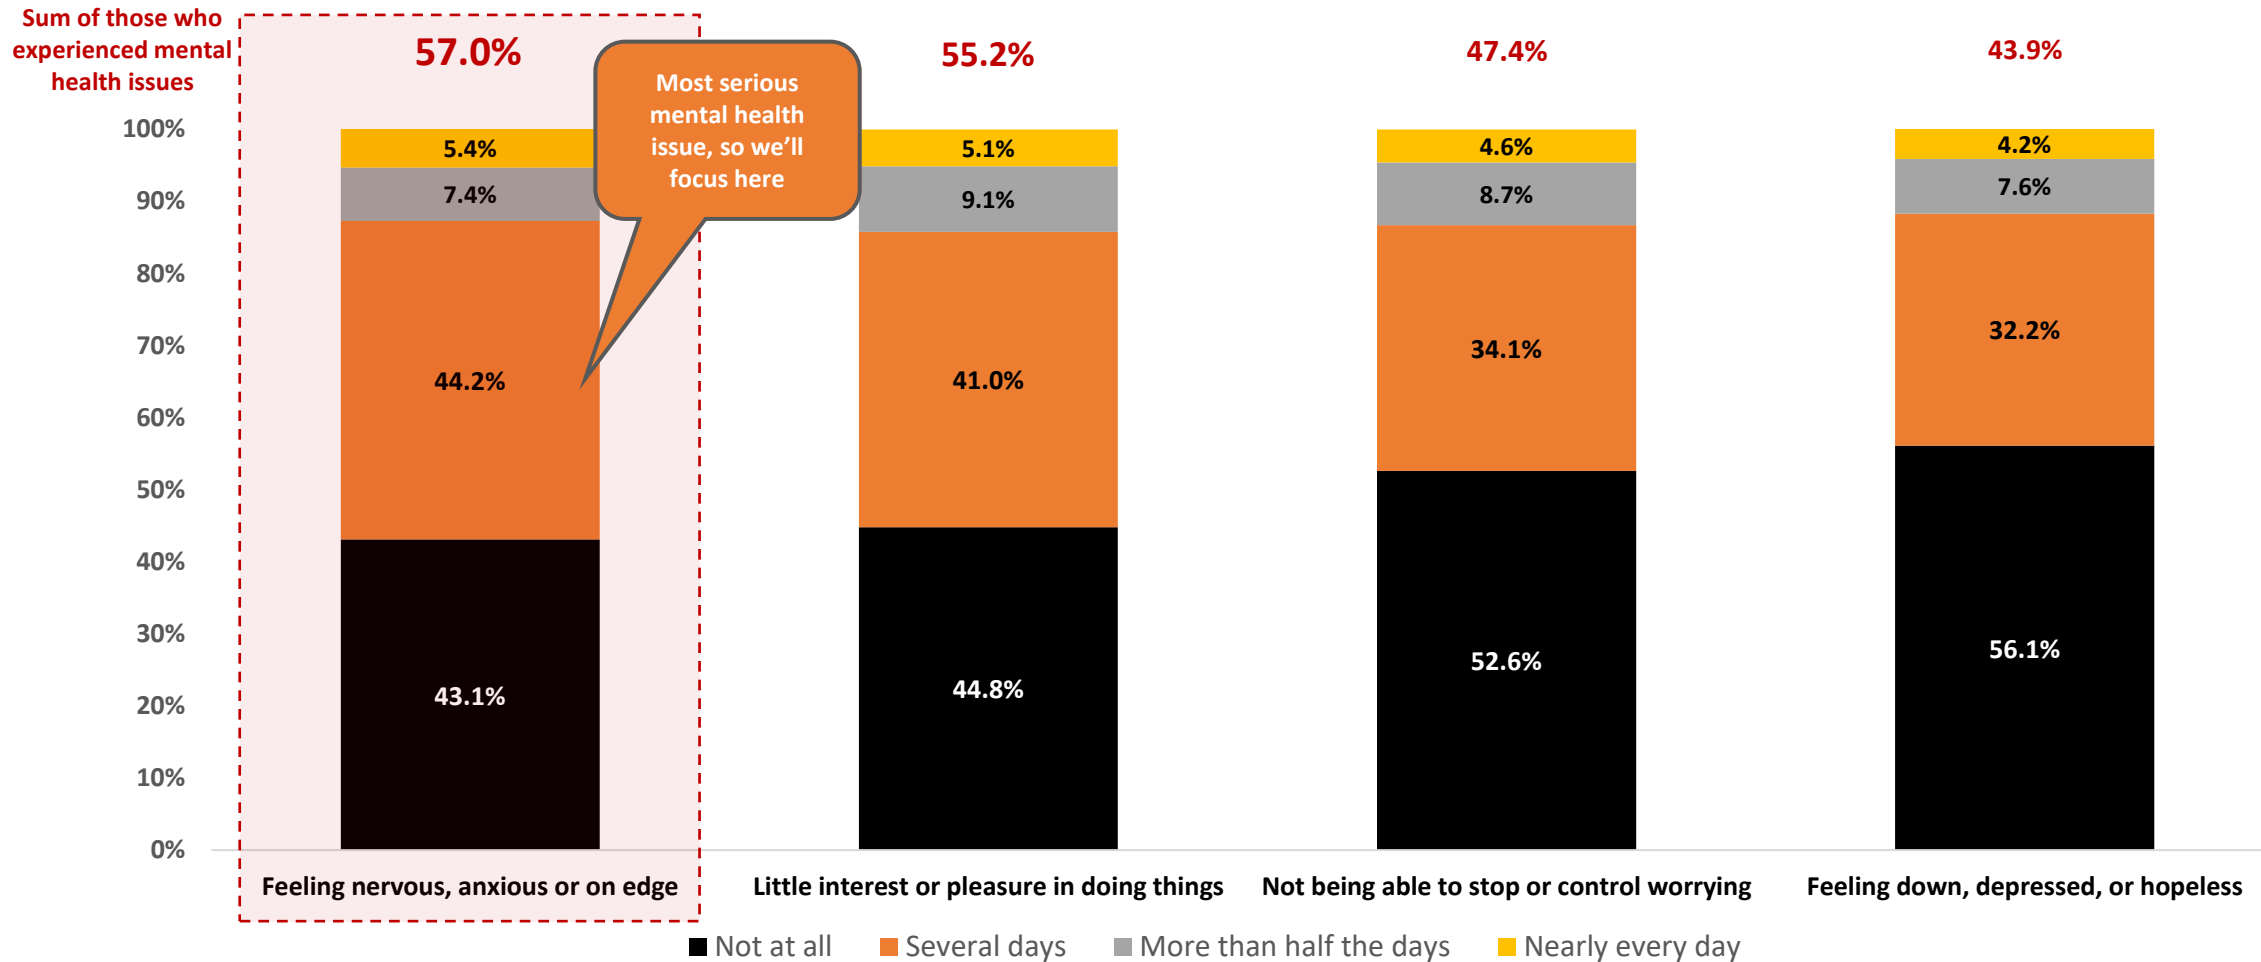

Among all Asians who experienced racial discrimination since COVID-19 outbreak in NZ, Chinese occupied near half of the cases (47.8%, n≈43,000) .

Distribution of People Who Experienced Racial Discrimination

Since lockdown, at least 43.9% of Asians have experienced some form of mental health distress. Nervousness and anxiety is the most widely experienced (57%), followed by little interest or pleasure in doing things, uncontrollable worrying, and feeling down or depressed.

NZ Asian Mental Health Status Since COVID19 Lockdown

Note: 1. Q12. Since Level 4 lockdown, how often have you been bothered by the following problems? Feeling nervous, anxious or on edge/Not being able to stop or control worrying/Little interest or pleasure in doing things/Feeling down, depressed, or hopeless. Base: Total sample

Gamblers (61.2%) and victims of racial discrimination (72.4%) were more prone to experience serious mental health issues than those who were not. These significant differences clearly indicate the harm associated with gambling activities and racial discrimination.

Feeling nervous, anxious or on edge¹ by Gambling Status

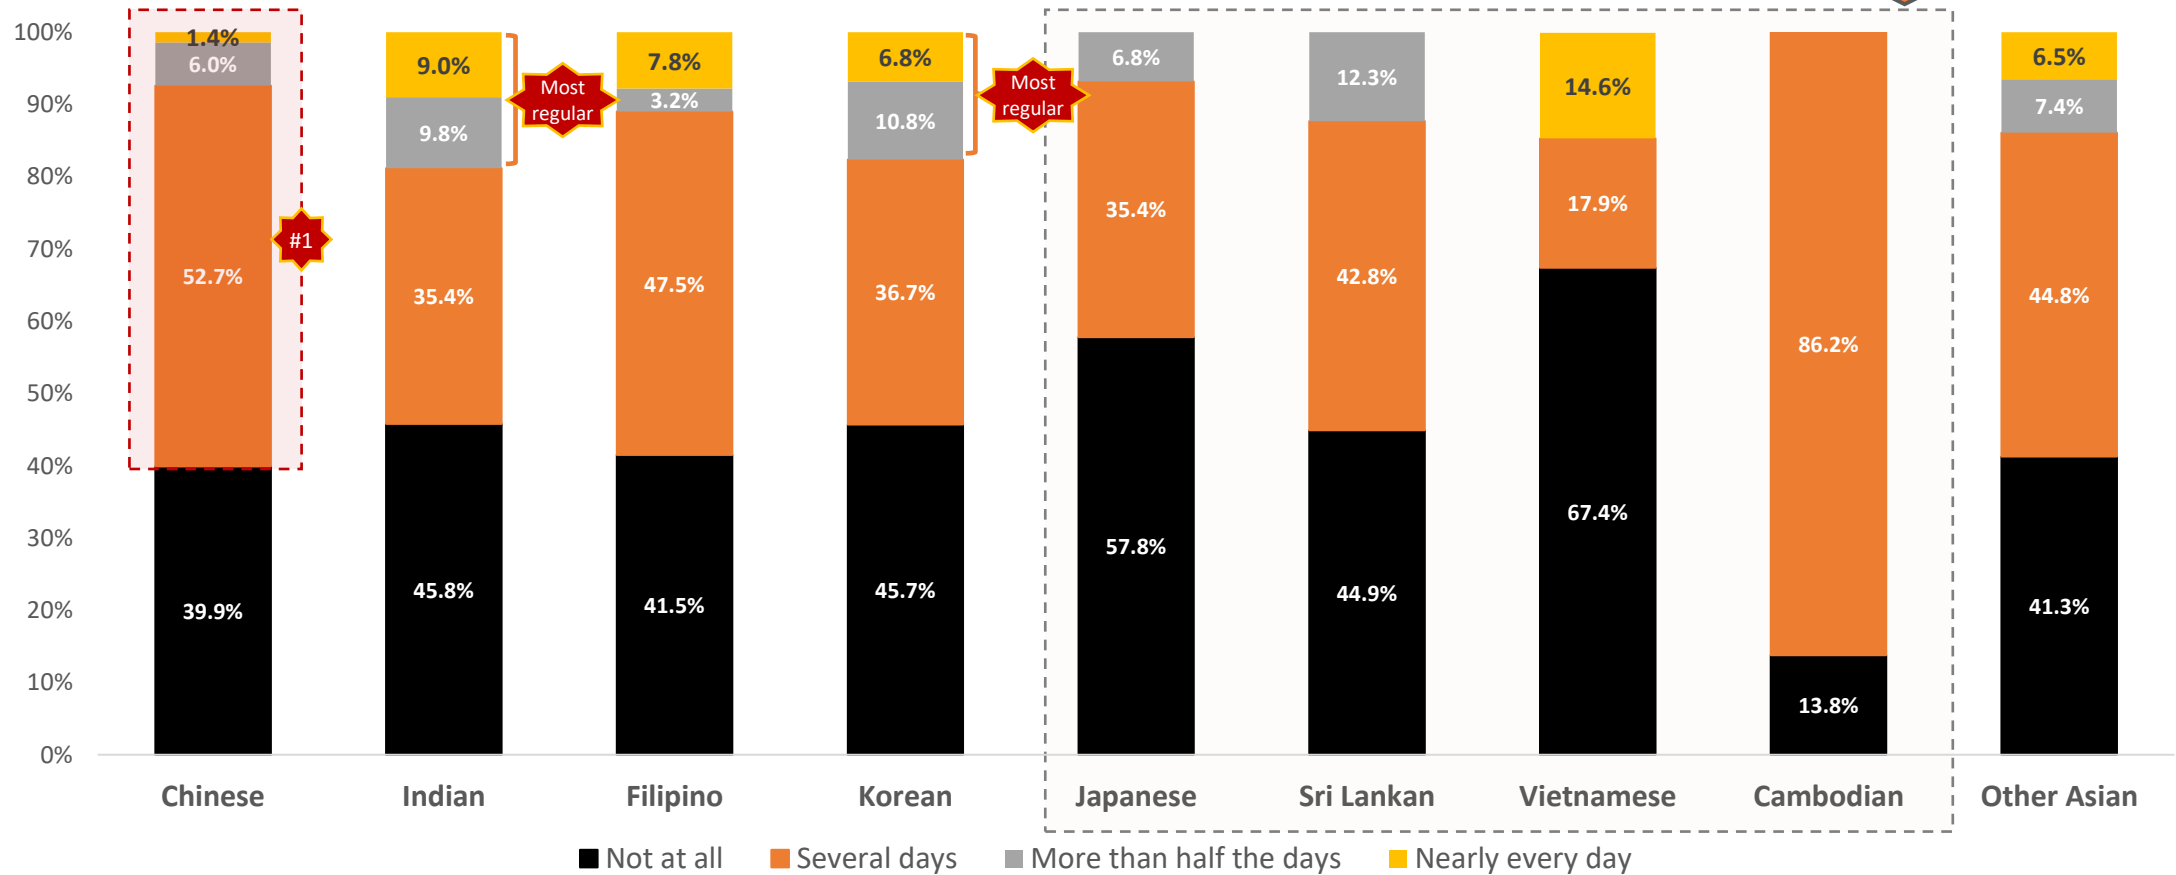

Feeling nervous, anxious or on edge¹ by Racial Discrimination

Chinese experience feeling nervousness or anxiety the most compared to other ethnicities. However those who experience it most regularly are reported amongst Indians and Koreans. Both Korean and Chinese were previously reported to experience racial discrimination the most.

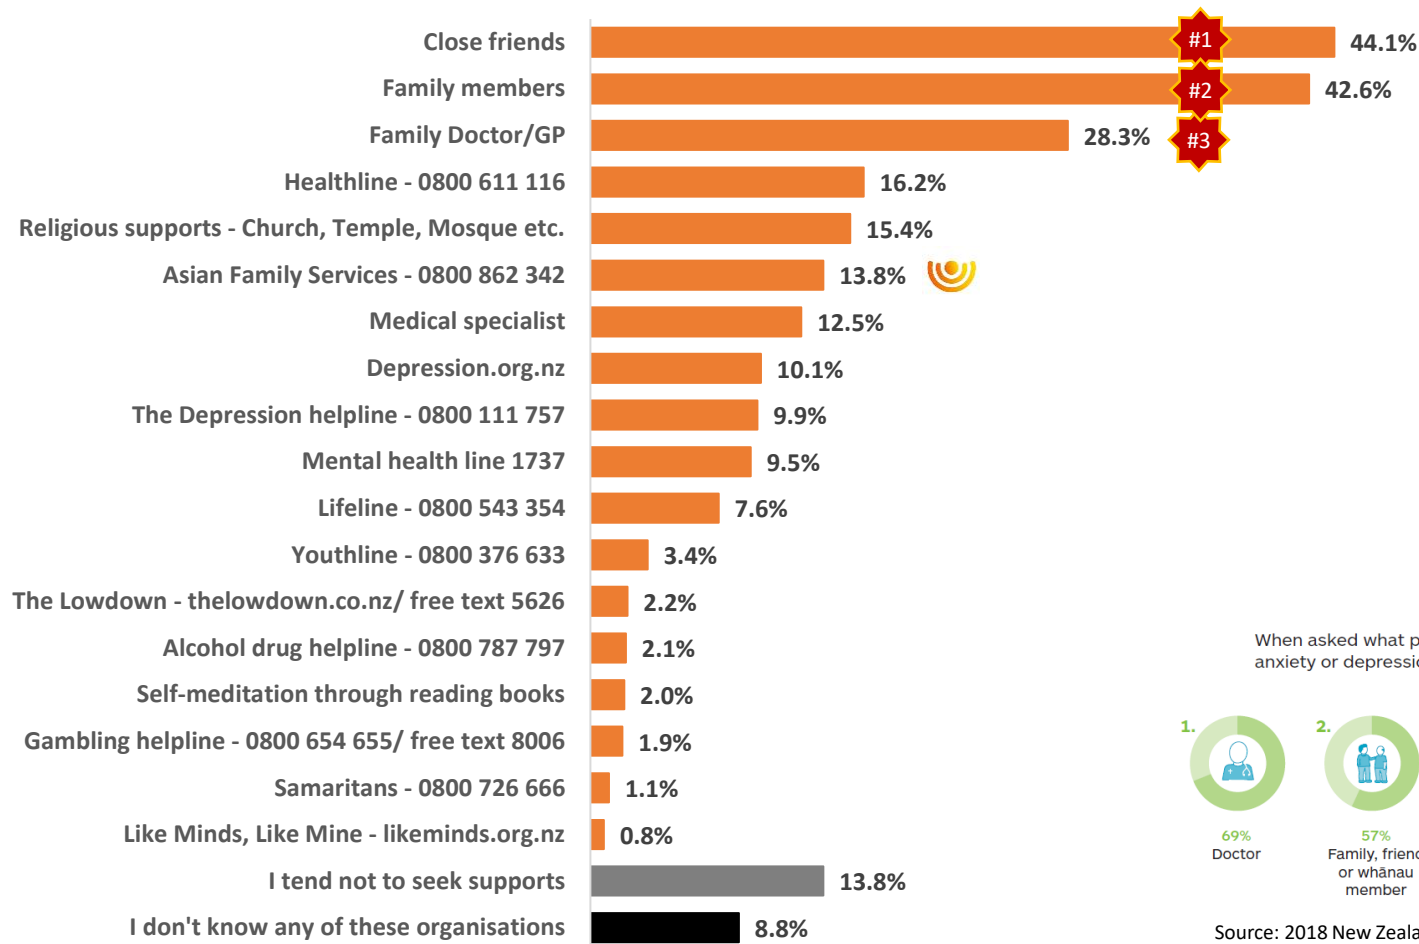

Feeling nervous, anxious or on edge¹ by Major Asian Ethnic Groups

Small sample size, interpret with caution

When it comes to seeking support for their mental health, Asians primarily seek help from close friends, family members, and their family doctor/GP. Overall, other forms of support services are sought out by 20% or less. When patterns are compared with national statistics (e.g., doctor - 69% & other health professionals - 48%), Asians are less likely to seek help from doctors and other health professional/organisations, hence more educational campaigns around professional mental health services are needed.

Research Company Background

Headed by Dr Andrew Zhu, Trace Research Ltd (NZ) is an independent market research and consultancy company based in Auckland. The governance of the company also consists of an academic advisory board, which provides conceptual and technical assessments and support for its market research projects.

In the early stages of the company's development, Dr Zhu focused mainly on providing contract based research and consultancy to other major domestic research agencies and business clients. In recent years, Dr Zhu and the company have expanded their client base to include overseas corporations, such as Chevron/Caltex, AIA, Huawei, UnionPay International, IAG and VW.

Having gained his PhD in Marketing from the University of Auckland Business School, and having worked in the business sector during and after his postgraduate studies, Dr Zhu is equipped with both theoretical knowledge and practical experience for delivering high quality market information and advice to his business clients. Since 2005, he has completed over 200 projects for 80 companies in the industries/sectors of fuel & lubricants, energy, food & beverage, dairy products (baby formula), banking & insurance, telecommunication, social media, tourism, and tertiary education. One of the most exciting projects in the company's portfolio was the political polling analysis for TV3 Newshub Political Poll. The results of that project received considerable public attention. Trace Research Ltd (NZ) has also been working with non-profit organisations in promoting social welfare and social responsibility.

In 2016, Dr Zhu was motivated by the safety concerns in the Chinese community in NZ, and conducted the ground-breaking social polling among 11,675 Chinese. It was the first ever polling conducted among ethnic Chinese in NZ's history. The project gained tremendous traction, and the result was reported by more than 20 domestic and international mainstream media networks. The polling result was also widely regarded as having great policy significance in New Zealand, and the Chinese research panel was established since then.

This research was commissioned by Asian Family Services and independently conducted by Trace Research Ltd.

The views expressed in this report are those of the researcher and **DO NOT represent the views of Asian Family Services.**
